WINDSOR PRODUCTS USED:

Pinnacle clad double hung and casement windows and patio doors in charcoal gray

Project Description

Complete interior demolition and remodel

Unique Requirements/Solutions

This project, located in Lexington, Kentucky, is the perfect example of how you can transform a worn home into an architectural masterpiece. This once-brick-red-home was completely gutted on the interior and reconfigured by Angela Forsee and her team at Greystone Restoration. They updated the rear of the home by modifying the exterior elevation and creating a more functional patio and outdoor living space. Custom-sized charcoal gray Pinnacle units were installed in the masonry openings. Windsor products installed included casements, double hungs and patio doors. To top it all off, the team at Greystone was able to complete this entire makeover in *only* 85 working days!

Comments from Project Associates

The owner of Greystone Restoration stated, "Windsor's quality and product integrity have supported Greystone clients for eight years. On the Gloucester project, our challenge was integrating a luxury color palette into this

(continued on next page)

traditional red brick home. Windsor's charcoal gray clad was the first step and everything else developed from there!"
