Sash Replacement Kits

# Windsor Revive™ Sash Replacement Kits

Three easy steps to install your new windows.

## Replace old, drafty, inefficient double hung sashes with energy-efficient, dual pane sashes.

Windsor's Revive Sash Replacement Kits make it easy. Each kit allows you to keep your existing interior trim and plaster in place. In addition, you have a choice of three replacement sashes: versatile primed wood; durable aluminum clad or; long-lasting, hassle-free cellular PVC. All sash options feature EZ Tilt for fast access and effortless cleaning. No matter your choice of Revive Sash Replacement Kit, you'll instantly improve the beauty, energy efficiency and upkeep of your home's windows.

### STEP ONE: Measure Opening

### STEP TWO: Remove Old Sash

### STEP THREE: Install New Sash

**Quick and minimally invasive installation**

*Note: Windsor's Revive sash replacement kits are designed to replace wood double hung windows. The wood side jamb pocket depth between the inside stop and the outside stop **MUST** measure at least 3-3/8" to accommodate the Revive sash replacement jambliner and clip.*

# How to Measure

## Width

- [1] Measure the width of the window sash opening being replaced.
- [2] Measure from the innermost points between the jambs (see photo).
- [3] Measure between the jambs at the following spots: top, middle and bottom (see photo).
- [4] Be sure you are measuring from jamb to jamb, not at the stops.
- [5] Write down the smallest of the three width measurements on the order form.
- [6] These measurements should be approximately 4" wider than the glass width.

## Height

- [7] Measure the height of the window sash opening being replaced (see photo).
- [8] Measure from the top jamb to where the exterior of the bottom sash sits on the sill when fully closed.
- [9] Measure at the left side, right side and middle.
- [10] Write down the smallest of the three height measurements on the order form.
- [11] These measurements should normally be about 6" greater than double the glass height.

## Sill

- [12] Check the sill angle with a carpenter's protractor or sill angle measuring tool available at most hardware stores (see photo).
- [13] Windsor's standard sill angle is 14°. Any sill angle other than standard must be specified on the order form (between 10° and 20°).

# Screen Measurements

1. Measure screen opening width. Measure the distance between brickmould as shown. Then, subtract  $\frac{1}{8}$ " to get actual screen width. For example, if brickmould width is 24", the screen width will be  $23\frac{7}{8}$ ".
2. Measure screen opening height. Measure the vertical distance between bottom of brickmould and top of sill nose. Then, subtract  $\frac{1}{8}$ " to get actual screen height. For example, if the brickmould-to-sill nose height is 48", then the screen height is  $47\frac{7}{8}$ ".

3. Drill for screen plungers. Mark all four locations of the screen plungers on the brickmould. Drill  $\frac{1}{4}$ " diameter holes into the brickmould.

Removable Wood Perimeter	7/8" or 1-1/4" Clear Select Pine	7/8" or 1-1/4" Clear Select Pine	No

1. Custom sizes in 1/4" increments. Kit may be adjusted to fit sash opening width 1/4" (max.) wider than standard size, via jambliner adjustment. The sash opening height cannot vary from standard. Openings larger than standard must be shimmed to standard size; smaller heights must be ordered as custom size.
2. Other glass options available; contact your Windsor distributor/dealer.
3. The insect screen is constructed of painted aluminum. Screen size ordered separate of the sash. The screen utilizes plungers, which need to engage grommets/holes in the exterior trim to hold the screen in place. These grommets/holes need to be installed on site and are not included.
4. Must specify bevel: 10° minimum/20° maximum.
